

Statement of Work

We will be implementing a CloudWatch instance to be used for monitoring and logging resource usage in an AWS infrastructure. Benjamin Bohnen and TJ will develop and implement a CloudWatch instance for the use of the client. To achieve this, we shall be using a Jira Board and backlog, Weekly Stand-ups and, and the use of a Github Repository.

Scope of the Project

- **CloudWatch will be used to:**
 - **Collect metrics and logs from EC2 Instances**
 - **Have Anomaly detection enabled**
 - **Create a Dashboard to allow the viewing of collected metrics.**

Estimated time of completion

Receive and agree to terms of project	6/5/2020
Jira board development	6/6/2020
Github repository	6/6/2020
Development and testing of Instance	6/8/2020-6/20/2020
Presentation of Project	6/23/2020
Implementation of customer support for site	6/24/2020

Cost

The total amount of work hours expected for each member is 8 hours at a rate of 45\$/hr. for a total cost of \$ 360 per member or \$1080 for the entirety of the project.

We also need an additional refundable security deposit in case there is a breach of contract from Alibamazon which will be 20% of the total cost of the project. This deposit is in place to ensure that alibamazon will give our team the time needed to complete the project.
